

PhishGuard X

Forensic Threat Intelligence Report

National Forensic Sciences University
Department of Cyber Security & Digital Forensics

VERDICT: SAFE

RISK SCORE

0/100

ML CONFIDENCE

0.0% None

BACK TYPE

Case ID: PHISH-20260718-205431_631882

Generated: 18 July 2026 20:54:31

Input: <https://github.com>

SHA-256: 697effcd1dc420177597adec9e24c953e42ebde1...0f1ff81d

1. EXECUTIVE SUMMARY
High-level threat overview

VERDICT: SAFE

0 / 100

LOW RISK

HIGH RISK

Report ID	PHISH-20260718-205431_631882
Timestamp	18 July 2026 20:54:31 UTC
Input Target	https://github.com
Verdict	SAFE
Risk Score	0 / 100
ML Confidence	0.0%
Attack Type	None
Campaign Detected	No

2. TARGET INFORMATION

Details of the scanned input

Input Value	https://github.com
Input Type	URL
Redirect Summary	1 hop(s) traced — 0 suspicious — Final destination: https://github.com/

3. WHOIS DOMAIN INTELLIGENCE

Registration and ownership analysis

WHOIS lookup skipped (IP input or lookup unavailable).

4. MACHINE LEARNING ANALYSIS
Random Forest — 200 estimators

Model	Random Forest Classifier (200 estimators, scikit-learn)
Features	8 URL-based features extracted per URL
ML Verdict	SAFE
Confidence	0.0%
Scoring Formula	Rules×0.4 + Redirects×0.4 + Content×0.4 + ML×0.6 (capped 100)

Feature Importance Analysis:

Social Engineering Keywords		22.0%
Brand Spoofing (Hyphens)		18.0%
URL Length		15.0%
IP Address Obfuscation		14.0%
HTTPS Encryption Status		12.0%
Subdomain Count		10.0%
Domain Length		5.0%
Credential Harvesting (@)		4.0%

5. RULE-BASED DETECTION FINDINGS

Static analysis — URL and pattern signals

1	Trusted Domain	DETECTED
---	----------------	----------

6. REDIRECT CHAIN ANALYSIS

Full URL redirect trace with risk classification

Summary	1 hop(s) traced — 0 suspicious — Final destination: https://github.com/
Total Hops	1

#	URL	Status	Classification	Final
1	https://github.com/	200	OK	Final

7. CONTENT ANALYSIS

Phishing language in email / SMS / file body

No content body provided or no phishing language detected.

9. CAMPAIGN INTELLIGENCE

Cross-URL domain tracking — coordinated attack detection

No campaign detected (1 URL(s) seen from 'github.com')

Domain	github.com
URLs Observed	1
Campaign Flagged	NO
Threshold	3+ URLs from same domain triggers campaign alert

Recent URLs from this domain:

URL	Verdict	Timestamp
https://github.com	SAFE	2026-04-17 20:39:47

10. ATTACK SIMULATION & KILL CHAIN
Step-by-step victim journey simulation

Attack Classification	None
-----------------------	------

No attack simulation applicable — input classified as SAFE. No kill chain, impact, or MITRE mapping is generated for safe inputs.

11. RECOMMENDATIONS & CONCLUSION

Actionable response steps

Input appears SAFE based on current analysis. Continue standard security hygiene.

Recommended Actions:

- Safe

General Security Best Practices:

- Never click links in unsolicited emails or SMS messages.
- Always verify the sender domain matches the official website.
- Enable multi-factor authentication on all accounts.
- Report phishing attempts to your IT / security team immediately.
- Check domain age and SSL certificate before entering credentials.
- Keep browser and antivirus software fully up to date.

12. ANALYSIS EXECUTION LOGS

Raw backend pipeline output for forensic audit

```
[+] Analysis Started [✓] Redirect Chain: 1 hop(s) traced – 0 suspicious – Final destination:
https://github.com/ [DB] URL stored successfully [✓] No campaign detected (1 URL(s) seen from
'github.com') [✓] Trusted domain (resolved final: https://github.com/) – SAFE
```

13. CRYPTOGRAPHIC EVIDENCE INTEGRITY

SHA-256 tamper detection — chain of custody

Report ID	PHISH-20260718-205431_631882
Algorithm	SHA-256
Evidence Hash	697effcd1dc420177597adec9e24c953e42ebde140c12c0d7396c2530f1ff81d
Purpose	Verifies this report has not been altered since generation. Any modification produces a different hash value.
